Subject: Waterproofing Plantation Island Resort, Fiji

Dear Michael,

It is my pleasure to confirm our recent discussions regarding my intention to specify RADCON Waterproofing System for the use in the current construction of a large Water Treatment Plant at Plantation Island Resort in Fiji.

As I briefly explained, my reason for the selection of RADCON FORMULA #7 was based on my experience as the architect for the "Stamford Grand North Ryde" Resort Hotel in Sydney which was built 26 years ago.

This project was designed surrounding a large open center court featuring a tropical oasis and lagoon interspersed with rock formations and waterfalls. The whole area below this center court, divided and supported by a structural reinforced concrete floor slab, is occupied by a Health Club / Gymnasium, internal swimming pool and car parking.

The difference in nature between the external and internal uses made it imperative to find a long lasting solution to waterproof the structure separating the upper and lower areas.

To this day, I am unaware nor have I been informed of any repair or replacement of the selected water proofing system during the past years. Based on such outstanding performance I have come to the conclusion that the use of RADCON FORMULA #7 will be the appropriate water proofing system for the project at hand in Fiji, in particular, taking into account restrictive conditions at the island location.

I shall provide further detailed information following my Fiji visit in a few days.

Kind regards

Peter
